John,

Ron, tom and I were out at the Fayette Quarry this past mon and tues doing clean up work. It appears that there is more infrastructure and garbage that initially thought.

We took 2 large loads of trash to the landfill and a full load to the metal recyclers in town. We also removed all of the used oil and dropped off to a recycler in SLC. We removed as much garbage as we could pull out. By pull out, I mean, that it appears that the Lessee decided that it would be easier to bury the contents of the previous building than remove it. Much has been covered over with quarry rock using a back hoe or another type of large equipment. I have several bills with his name or company on that were buried.

As far as remaining infrastructure, there is a large underground storage tank, (approx. 30,000 gallon) and piping on top of a hill just west of where the building was located that will need to be removed. The tank was empty but smelled of hydrocarbons. There was an above ground tank (approx 10,000 gallons) on the site next to a water spigot that appeared to be used for water storage. I took several GPS points of objects at the site and will send to you when I get if from Kate. I GPS'd the building corners to give an idea of how much concrete is there. There is a great deal of wiring (buried) still in place around the concrete pad that will need to be removed. Isn't there a water well at the site? Do you know where this is located? Can you send the info on this, as this will need to be properly closed. These are all things (including removal of remaining garbage) that the bond is going to need to rectify.

Do you have an operations plan? If you could get that to me, that may also identify other aspects of his operations that we are not aware of.

Any updated info on the bond? Do you want me to work with DOGM on the clean up or will you do this? If you choose to oversee work, I want to be at the site during the remedial work to inventory what else is found and ensure work is done properly. There are a few areas of stained soil that will need to be removed and we may find more as the rubble is removed from the trash. there is some evidence (misc. parts) that a semi may be buried there.

If you want to meet and discuss next steps, perhaps Monday with Tom and Ron and I? Please let me know.

I have attached some photos.

Thanks for your help.
